WEB TRAFFIC ANALYTICS REPORT

Website Traffic, Engagement and Registration Conversion Analysis

1. Project Overview

This project analyzes website session data to understand traffic sources, visitor engagement, landing-page performance, device-based behavior and registration conversion. The objective is to identify performance gaps and provide data-driven improvement recommendations.

2. Key Performance Indicators

Metric	Result	Metric	Result
Total Sessions	900	Bounce Rate	4.89%
Average Session Duration	243.49 sec	Average Pageviews	3.45
Registration Starts	277	Completed Registrations	166
Overall Conversion Rate	18.44%	Registration Completion Rate	59.93%

3. Dataset Information

The dataset contains 900 website sessions and 12 columns. It includes session dates, landing pages, traffic sources, campaigns, device categories, regions, session duration, pageviews, registration activity and bounce status.

4. Traffic Source Analysis

Source	Sessions	Bounce Rate	Conversion Rate	Avg Pageviews
Direct	207	5.80%	17.39%	3.32
Email	127	4.72%	23.62%	3.51
Google Organic	265	3.02%	15.47%	3.51
Instagram	93	4.30%	23.66%	3.74
LinkedIn	123	6.50%	17.07%	3.38
Referral	85	7.06%	18.82%	3.29

5. Landing Page Analysis

Landing Page	Sessions	Starts	Completed	Drop-offs	Conversion Rate
/	161	45	21	24	13.04%
/faq	144	44	26	18	18.06%
/login	144	49	33	16	22.92%
/programs	161	49	29	20	18.01%
/register	151	42	29	13	19.21%
/verify	139	48	28	20	20.14%

Note: Landing-page results represent session outcomes grouped by the recorded landing page. The dataset does not contain page-by-page navigation or exit-page tracking.

6. Device Category Analysis

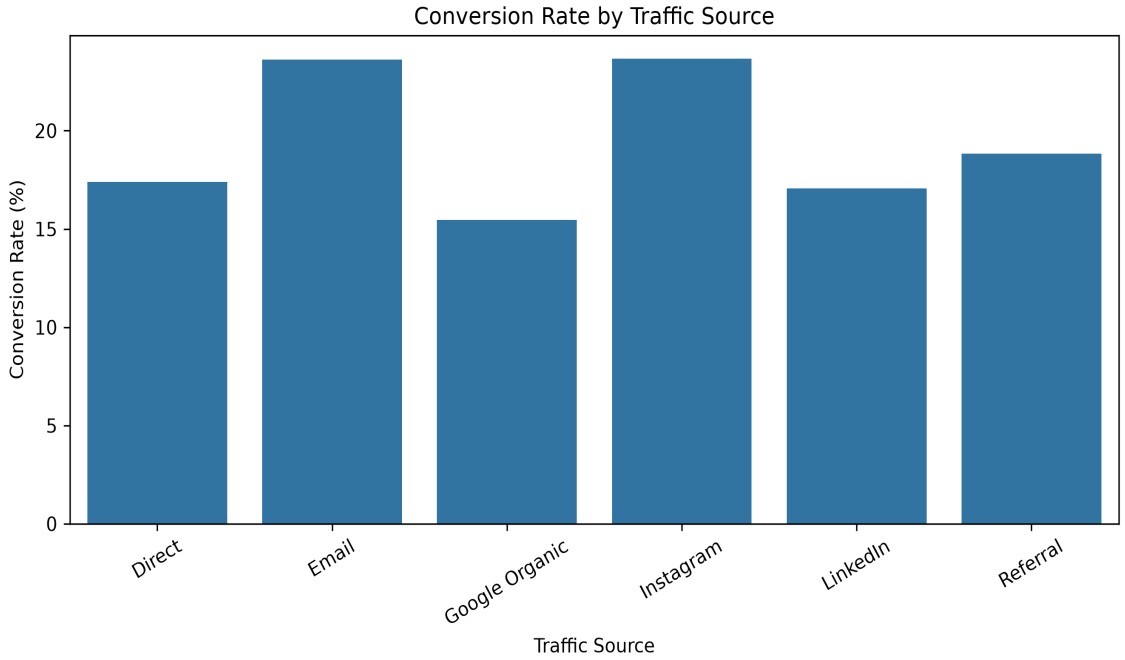

Device	Sessions	Avg Duration (sec)	Avg Pageviews	Conversion Rate	Bounce Rate
Desktop	261	247.59	3.49	21.84%	4.60%
Mobile	593	242.26	3.45	17.54%	5.06%
Tablet	46	236.04	3.28	10.87%	4.35%

7. Registration Funnel

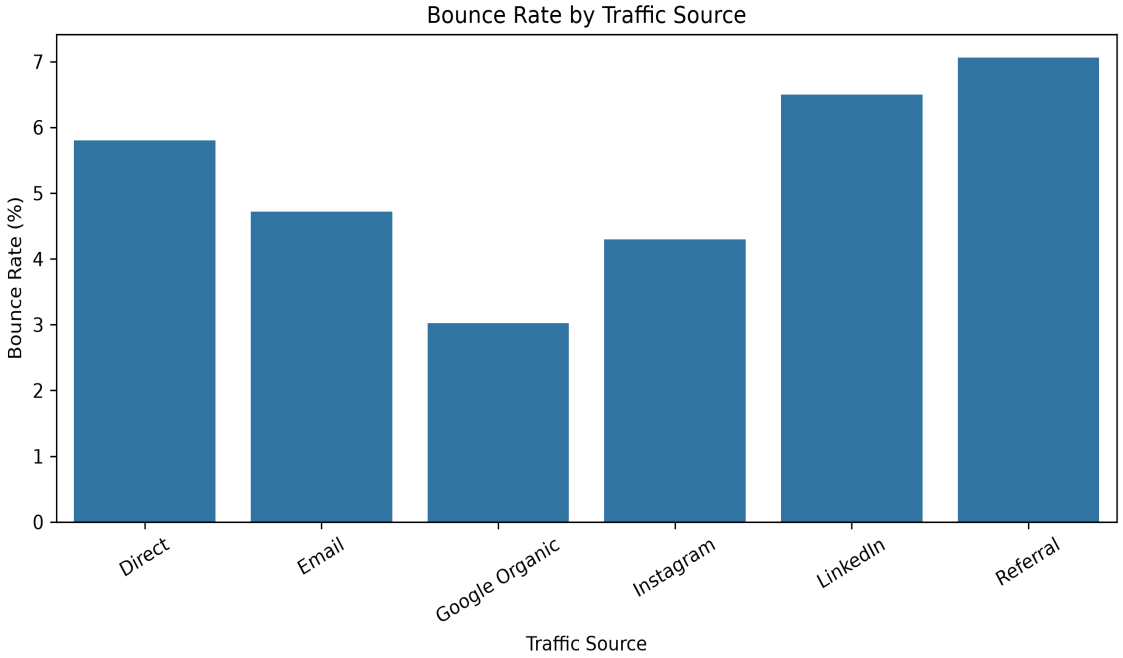

Funnel Stage	Sessions	Conversion from Previous Stage
Total Sessions	900	100.00%
Registration Started	277	30.78%
Registration Completed	166	59.93%

A total of 623 sessions did not start registration. Another 111 sessions started registration but did not complete it. Overall, 166 out of 900 sessions resulted in completed registrations.

8. Key Findings

• Instagram recorded the highest source conversion rate at 23.66%.

• Email recorded a conversion rate of 23.62%.

• Google Organic generated the highest traffic with 265 sessions, but its conversion rate was 15.47%.

• Referral traffic recorded the highest source bounce rate at 7.06%.

• The homepage (/) had the highest registration drop-off count at 24.

• Desktop users recorded the highest device conversion rate at 21.84%.

• Mobile devices generated the highest traffic with 593 sessions.

• Tablet users had the lowest device conversion rate at 10.87%.

9. Recommendations

• Study Instagram and Email campaigns to understand which factors contribute to their stronger conversion rates.

• Review Google Organic landing-page relevance and improve calls to action.

• Investigate Referral traffic quality and landing-page experience.

• Review homepage content and registration prompts to reduce drop-offs.

• Test and improve the mobile registration experience.

• Investigate tablet usability and responsive design.

• Track page-level navigation and exit events in future analytics to identify exact drop-off pages.

10. Data Limitations

The dataset contains no explicit Ads traffic category. The available sources are Google Organic, Direct, Email, LinkedIn, Instagram and Referral. Exact exit pages and page-by-page navigation are not recorded, so specific exit-page claims cannot be established. The findings describe the supplied dataset and do not prove causation.
